

## PLANT AND EQUIPMENT MANAGEMENT POLICY

Welldrill recognises that achieving a safe, efficient and effective company extends to the design, purchase, maintenance and decommissioning of all plant and equipment. Welldrill will ensure that any plant and equipment meets high standards of design, safety, environmental and performance specifications.

Welldrill thoroughly researches and tests all design, safety, environmental and performance specifications for all equipment prior to and post purchase.

Prior to being introduced into operations, all plant and equipment will go through Welldrill's risk management processes to identify any new hazards and implement risk controls where necessary.

We identify Client's minimum standards for constructability pre-mobilisation and incorporate their standards into our own where relevant. We are committed to meeting the Clients' requirements.

Plant and equipment will be serviced and maintained in line with OEM recommendations and industry standards to ensure we are continually reviewing, maintaining and/or improving our standards throughout the life of the plant/equipment. All inspections and any remedial action taken where required are documented to verify compliance with required standards.

A handwritten signature in blue ink, appearing to read "Peter Chegwidden".
